- User Tests: I asked two users to simply explore the app.
  - One wished that the app started at Start rather than stats, so I changed the first page to start. They also thought it would be better if the categories under 'more' closed when clicked again and that the start page showed the route so I made it when you clicked a cattagory in 'more' they collapsed and I added a route to the map in 'start'

- o The other said that the logo should go to the starting page so I made it that when the CardeeOh logo was tapped it brought you to the 'start' page.
- Color Scheme:
  - o The color scheme is actually the same as what was provided with adobe XD. At first I was going to change the colors for the second version but I soon found that I liked the color scheme given to me. It was nice, simple and clean. I tried to do a light green to symbolize health but I found that I preferred the previous blue color better. So I stuck with it.
- Images: The only images I used in this project were Icons given to me by Adobe XD and a selfie I took of myself.
- InVision Prototypes:
  - o V1.0: https://invis.io/72FVMAE3UEC
  - o V2.0: https://invis.io/HUFWMT1QVY9
